

Effects of Degradation on the Severe Accident Consequences for a Pwr Plant with a Reinforced Concrete Containment Vessel

Filesize: 2.89 MB

Reviews

This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It has been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, alter the way I believe.
(Prof. Loyce Runolfsson Jr.)

EFFECTS OF DEGRADATION ON THE SEVERE ACCIDENT CONSEQUENCES FOR A PWR PLANT WITH A REINFORCED CONCRETE CONTAINMENT VESSEL

To save **Effects of Degradation on the Severe Accident Consequences for a Pwr Plant with a Reinforced Concrete Containment Vessel** eBook, remember to refer to the button under and download the file or get access to other information which are in conjunction with EFFECTS OF DEGRADATION ON THE SEVERE ACCIDENT CONSEQUENCES FOR A PWR PLANT WITH A REINFORCED CONCRETE CONTAINMENT VESSEL book.

Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.Various forms of degradation have been observed in the containment vessels of a number of operating nuclear power plants in the United States. Examples of degradation include corrosion of the steel shell or liner, corrosion of reinforcing bars and prestressing tendons, loss of prestressing, and corrosion of bellows. The containment serves as the ultimate barrier against the release of radioactive material into the environment. Because of this role, compromising the containment could increase the risk of a large release in the unlikely event of an accident. Previous work in this area has assessed the effects that degradation has on the pressure retaining capacity of the containment vessel through structural analysis that account for degradation. These analyses have provided useful information about the effects of the degradation on the structural capacity of the containment in both deterministic and probabilistic fashions. However, the appropriate metric to use in assessing containment degradation effects during a severe accident was determined to require additional study. The previous work with probabilistic descriptions of the containment capacity were obtained from the results of the structural analysis models, and used as input for the risk models (Probabilistic Risk Assessment analyses). The risk was formulated in terms of the large early release frequency (LERF). The relative LERF values were computed for various postulated cases of degradation. In that study, an instance of degradation was treated as a change in the plant s licensing basis and assessed with U.S. NRC Regulatory Guide 1.174, An Approach for Using Probabilistic Risk Assessment in Risk-Informed Decisions on Plant-Specific Changes to the Licensing Basis. The Regulatory Guide provides the limits of the acceptable increases in LERF due to changes in the plant....
