Such a turbine is so constructed that all the available low-pressure steam enters it at the proper point. A mixed-pressure turbine is, therefore, used where it gives better overall efficiency, although it has a poorer economy on low-pressure steam alone due to the dead load of the idle high-pressure element. The relative proportion of the high-and low-pressure elements will be determined by the amounts of steam of each class to be handled and the continuity with which they are supplied. Such a turbine must be equipped with a governor. MIXED-PRESSURE TURBINE In cases where the amount of power required is in excess of that which may be generated by the continuous supply of low-pressure steam there are several forms of machines available, designed to operate from two sources...
